ldap

Contents

ldap is the lightweight directory access protocol. It provides access to an X.500 directory, or to a stand-alone LDAP server.

You can use the ldap kioslave as follows:

`ldap://host:port/ou=People,o=where,c=de??sub` for a subtree-query

or **`ldap://host:port/cn=MM,ou=People,o=where,c=de??base`** for a complete branch.
